Who Should Read This Book?xviii
What's in This Book?xviii
Why Python?xx
Information Accessibilityxxi
Online Resourcesxxii

PART I: ENVIRONMENT AND CONVENTIONS 1

1	
SETTING UP THE ENVIRONMENT	3

Simple Environment Configuration with Anaconda	4
Linux	4
Windows	6
macOS	8
Setting Up a Virtual Environment	9
Installing the IDE with Anaconda	10
Advanced Setup	10
Setting Up virtualenv	10
Installing the IDE without Anaconda	11
Jupyter Notebooks	11
Summary	12

2	
PROGRAMMING AND MATH CONVENTIONS	13

Syntactical Constructs	13
List Comprehensions	14
Dictionary Comprehensions	15
Zipping and Unpacking	17
Mathematical Notation	18
Boolean Notation	18
Set Notation	20
Attribute Characters	22
Greek Letters and Functions	22
Summary	23

PART II: GRAPH THEORY AND COMPUTATIONAL GEOMETRY

25

3		
SECURING NETWORKS WITH GRAPH THEORY		27
Graph Theory for Security Applications		28
Introduction to Graph Theory.		31
Creating Graphs in NetworkX		32
Discovering Relationships in Data.		34
Measuring Node Importance		35
Analyzing Cliques to Track Associations		39
Determining the Connectedness of the Network		40
Using Graph Edges to Capture Important Details		42
Summary		43
4		
BUILDING A NETWORK TRAFFIC ANALYSIS TOOL		45
Network Topology Visualization.		46
Converting Network Information into a Graph.		47
Building a Communication Map		48
Building the Graph		49
Identifying Suspicious Machine Behavior.		52
Subgraph of Port Data Volume		52
Identifying Unusual Levels of Traffic		54
Examining How Machines Interact on the Network		57
The Proof of Concept: Network Traffic Analysis		61
Summary		64
5		
IDENTIFYING THREATS WITH SOCIAL NETWORK ANALYSIS		67
The Small-World Phenomenon		68
Graphing Social Network Data		69
Structuring the Data.		69
Visualizing the Social Network		72
Network Analysis Insights		74
Calculating Information Propagation		74
Identifying Cliques and Most Influential Users		76
Finding the Most Influenced Users		78
Using Topic-Based Information Exchange		79
Analyzing Network Organization		83
The Proof of Concept: Social Network Analysis		87
The Darker Side of Social Network Analysis		89
Summary		89

6		
ANALYZING SOCIAL NETWORKS TO PREVENT SECURITY INCIDENTS		91
Using Monte Carlo Simulations to Predict Attacks	92	
Finite State Machines	93	
Network Modeling with Random Walks	95	
Monte Carlo Simulation	97	
Simulating Social Networks	100	
Modeling User Interaction	100	
Modeling Topic-Based Influence	104	
Modeling Information Flow	108	
The Proof of Concept: Disrupting the Flow of Information	109	
Modeling an Evolving Network	110	
Moving the Message Through the Network	111	
Measuring the Amount of Information Flow	112	
How the Game Works	113	
The Game Objective	117	
The Game Simulation	118	
Improvements to Player 2	120	
Summary	124	
7		
USING GEOMETRY TO IMPROVE SECURITY PRACTICES		127
Describing Shapes	128	
Points and Lines	128	
Polygons	129	
Vertex Order	132	
Scenario: Planning Security for a Concert	132	
Calculating Safe Occupancy Limits	133	
Determining Placement of Security Personnel	136	
Estimating Guard Patrol Timing	137	
Improving Guard Placement	138	
Summary	140	
8		
TRACKING PEOPLE IN PHYSICAL SPACE WITH DIGITAL INFORMATION		141
Gathering Cellular Network Data	142	
Ethics of Tracking Devices and People	144	
The OpenCellID API Structure	145	
The Proof of Concept: Locating a Device from Nearby Cell Towers	148	
Gathering Tower Locations	149	
Translating a Geographic Point to a Polygon	150	
Calculating the Search Area	153	
Mapping the Search Area for Investigators	157	
Reducing the Search Area	159	
Summary	159	

9		
	COMPUTATIONAL GEOMETRY FOR SAFETY RESOURCE DISTRIBUTION	161
	Using Voronoi Tessellation for Resource Distribution	162
	The Proof of Concept: Analyzing Fire Station Coverage	163
	Defining the Distance Function	164
	Determining the City Shape	164
	Gathering the Locations of Existing Fire Stations	167
	Performing the Voronoi Analysis	170
	Limitations of the Algorithm	173
	Summary	174

10		
	COMPUTATIONAL GEOMETRY FOR FACIAL RECOGNITION	175
	Uses of Facial Recognition in Security	176
	Ethics of Facial Recognition Research	178
	The Facial Recognition Algorithm	179
	Using Decision Tree Classifiers	179
	Representing Facial Geometry	182
	Processing Image Data	184
	Locating Facial Landmarks	185
	The Proof of Concept: Developing a Facial Recognition System	188
	Facial Statistics	189
	Memory Management	190
	Data Loading	191
	Feature Engineering	193
	Model Training	198
	Model Persistence	203
	Summary	204

PART III: THE ART GALLERY PROBLEM 207

11		
	DISTRIBUTING SECURITY RESOURCES TO GUARD A SPACE	209
	Determining the Minimum Number of Guards	211
	Art Gallery Problem Theory	212
	Geometric and Graph Representations of the Gallery	214
	Securing the Gallery	216
	Mapping Guard Coverage	219
	Defining Obstructed Areas	223
	Prioritizing Guard Coverage Areas	225
	Mapping Security Camera Field of View	229
	Summary	231

12		
THE MINIMUM VIABLE PRODUCT APPROACH TO		
SECURITY SOFTWARE DEVELOPMENT		233
Mapping the User’s Interactions	234	
Planning Application States	235	
Documenting the Application	236	
Developing the State Manager	237	
Accelerating Security with Parallel Processing	241	
Threading Parallelism	241	
Processor Parallelism	243	
Adding a Graphical User Interface.	245	
Displaying and Managing Images in PyGame	246	
Organizing Graphics with Sprites and Layers.	248	
Saving and Reloading Project Data	251	
Saving to a Dictionary	251	
Loading from JSON Files	252	
Running the Example Application.	254	
Summary	256	
13		
DELIVERING PYTHON APPLICATIONS		257
Using Setup Scripts.	258	
Packaging with Python Interpreters	259	
Distributing with Cloud Microservices	260	
Licensing with PyArmor	264	
Open Source Delivery	265	
Summary	266	
NOTES		269
