CONTENTS IN DETAIL

ACKNOWLEDGMENTS **xix**

INTRODUCTION **xxi**

Why Is Julia Popular with Scientists? ... xxii
What Will This Book Do for You? ... xxiii
How to Use This Book ... xxiii
Book Overview ... xxiv

PART I
LEARNING JULIA

1
GETTING STARTED **3**

Installation Guide ... 3
Hardware Requirements ... 4
Prerequisites ... 4
Julia Versions ... 5
Installation ... 6
Privacy Note ... 9
The Julia Coding Environment ... 9
The Julia REPL ... 10
Text Editors ... 14
Jupyter Notebooks ... 16
Pluto: A Better Notebook ... 17
Integrated Development Environments ... 20
Recommendations ... 23

2
LANGUAGE BASICS **25**

The Syntax: Data Types, Expressions, and Blocks ... 26
Types of Numbers ... 26
Operations and Expressions ... 27
Logic ... 31
Looping: while Blocks ... 32
if Blocks ... 33
Arrays ... 33

Ranges 35
Arrays: Beyond the First Dimension 36
Tuples 42
Membership 43
Strings and Characters 44
Characters 44
Strings 44
More Looping: for Blocks 46
Functions 48
Composing Functions 50
Creating Anonymous Functions 51
Broadcasting 51
Scope 52
Scoping Rules for Functions 52
Scoping Rules for Loops 54
Modification of Scoping Rules in Interactive Contexts 54
Mutability 55
Functions That Mutate Their Arguments 56
Strings Are Immutable 57
Comments in Code 59
Congratulations 59

3
MODULES AND PACKAGES **61**

Modules 62
Understanding Namespaces 62
Using Installed Modules 62
Selective Importing and Renaming 65
Creating Modules 65
Documenting Functions with Docstrings 67
The Package System 69
How to Add and Remove Packages 69
The Load Path 70
The Nature of a Package 71
The Benefits of Packages 72
How to Create Packages 73
Julia and Git 77
The Relationship Between Package Versions and Git Commits 78
Version Updating and Pinning 79
How to Find Public Packages 80
Conclusion 81

4
THE PLOTTING SYSTEM **83**

Plots 84
The Backend System 84

Modes of Interaction with Plots ... 86
2D Plots ... 86
Plotting from Vectors ... 87
Plotting Functions ... 88
Plotting Vectors of Vectors or Functions ... 90
Displaying and Mutating ... 91
Creating Parametric Plots ... 93
Making Polar Plots ... 94
Making Scatterplots ... 95
Optional and Keyword Arguments ... 96
Basic Plot Settings ... 98
Font Attributes ... 100
The Frame Styles ... 100
Working with Plot Settings ... 101
Aspect Ratio and Title Font Size ... 101
Labels and Legend Positioning ... 102
LaTeX Titles and Label Positioning by Data ... 103
Regression Lines ... 105
Saving Plots ... 106
Detail Insets ... 106
3D Plots ... 108
Surface Plots ... 108
Heatmaps ... 110
Contour Plots ... 110
3D Parametric Plots ... 112
Vector Plots ... 113
3D Scatterplots ... 114
Useful Backends ... 115
UnicodePlots ... 115
PyPlot ... 116
PlotlyJS ... 116
PGFPlots and PGFPlotsX ... 116
HDF5 ... 116
Gaston ... 116
Layouts ... 117
Making Simple Rectangular Layouts ... 117
Using grid() ... 118
Creating Complex Layouts Using @layout ... 118
Conclusion ... 121

5
COLLECTIONS **123**

Controlling Loop Execution ... 123
The break Statement ... 124
The continue Statement ... 125
Comprehensions and Generators ... 125

More Ways to Join Strings 128
Nonstandard String Literals 128
Raw Strings 129
Semantic Version Strings 129
Byte Array Literals 130
String Searching and Replacing 131
String Interpolation 133
Additional Collection Types 134
Dictionaries 134
Sets 135
Structs 137
Named Tuples 138
Initializing Arrays with Functions 139
The repeat() Function 139
The fill() Function 139
Mutability with the fill() and repeat() Functions 140
The zeros() and ones() Functions 141
The reshape() Function 141
Array Manipulations Useful in Numerical Algorithms 142
General Concatenation 142
Logical Indexing 143
Adjoints and Transposes 144
Matrix Multiplication 146
Enumeration and Zipping 147
The enumerate() Function 147
The pairs() Function 148
The zip() Function 150
Conclusion 151

6
FUNCTIONS, METAPROGRAMMING, AND ERRORS 153

Functions and Their Arguments 154
Concise Syntax for Keyword Arguments 154
The Splat and Slurp Operators 154
Destructuring 157
Operators Are Functions Too 159
The Mapping, Filtering, and Reduction Operators 161
do Blocks 166
Symbols and Metaprogramming 167
Expression Objects 168
Expression Object Interpolation 169
Macros 170
How to Create Macros 171
Useful Macros 173

Error Handling 178
Types of Errors 178
The Call Stack 179
try...catch Blocks 181
Using throw() 183
The finally Clause 186
Conclusion 186

7
DIAGRAMS AND ANIMATIONS 189

Diagramming with Luxor 190
The Graphs Package 192
The Adjacency Matrix 196
Factor Trees 197
Animations with Javis 198
Closures 199
Epicycle Animation 200
Animations with Reel 206
Interactive Visualizations in Pluto 208
Conclusion 210

8
THE TYPE SYSTEM 213

Types in Practice 214
"Big" and Irrational Types 216
Type Promotion 219
Collections 220
The Type Hierarchy 222
Type Assertions and Declarations 224
Functions and Methods: Multiple Dispatch 229
Creating Multiple Methods 230
Extending Built-in Functions with New Methods 232
Understanding Union Types and the <: Operator 233
User-Defined Types 234
Creating Abstract Types 234
Creating Composite Types 234
Using Composite Types 236
Defining structs with Base.@kwdef 241
Performance Tips 242
Vanquish Type Instability 242
Avoid Changing the Types of Variables 245
Type Aliases 247
Parametric Types 248

Plot Recipes 252
The Plotting Pipeline 254
The Series Recipe 255
The Plot Recipe 259
Type Recipes 260
User Recipes 262
The @userplot Macro 263
Conclusion 264

PART II
APPLICATIONS

9
PHYSICS **269**

Bringing Physical Units into the Computer with Unitful 270
Using Unitful Types 271
Stripping and Converting Units 272
Typesetting Units 274
Plotting with Units 276
Making Plots for Publication 277
Error Propagation with Measurements 280
Fluid Dynamics with Oceananigans 284
The Physical System 284
The Grid 285
The Boundary Conditions 286
The Diffusivities 286
The Equation of State 287
The Model and Initial Conditions 287
The Simulation 288
The Results 290
Solving Differential Equations with DifferentialEquations 294
Defining the Physics Problem and Its Differential Equation 294
Setting Up the Problem 295
Solving the Equation System 296
Examining the Solutions 297
Defining Time-Dependent Parameters 299
Parametric Instability 300
Combining DifferentialEquations with Measurements 302
Conclusion 303

10
STATISTICS **305**

Probability 306
Random Numbers in Julia 307

The Monty Hall Problem ... 310
Counting ... 312
Factorials ... 312
Binomial Coefficients ... 313
Modeling a Pandemic ... 313
Common Statistics Functions ... 319
Distributions ... 321
The Normal Distribution ... 323
Probability Density Functions ... 325
Dealing with Data ... 327
Missing Values ... 328
CSV Files ... 332
Dataframes ... 333
Multivariate Data ... 351
Other Packages ... 358
JuliaDB for Out of Core Datasets ... 358
RCall for Interacting with R ... 358
P-hacking ... 358
Conclusion ... 358

11
BIOLOGY **361**

The Julia Biology Ecosystem ... 361
Simulating Evolution with Agent-Based Modeling ... 362
Overview of the Simulation Problem ... 363
The Predator and Prey Agents ... 364
Constants Defining Model Behavior ... 365
Utility Functions ... 366
Model Initialization ... 367
Functions to Extract Information from the Model ... 368
Stepping Through the Simulation ... 369
Running the Simulation ... 373
Visualizing System Behavior ... 373
Analyzing the Results ... 376
Conclusion ... 379

12
MATHEMATICS **381**

Symbolic Mathematics ... 382
Numerical-Symbolic Modeling with Symbolics ... 382
Math Manipulation with SymPy and Pluto ... 388
Linear Algebra ... 395
Views ... 395
Linear Algebra Examples ... 397
The LinearAlgebra Package ... 399

Specialized Matrix Types 400
Equation Solving and factorize() 402
Conclusion 403

13
SCIENTIFIC MACHINE LEARNING **405**

Automatic Differentiation in a Physics Problem 406
Differentiating with ForwardDiff 406
Calculating Forces from Potentials 408
Probabilistic Programming 413
Testing for Fairness of a Coin 413
Inferring Model Parameters from Series Observations 419
Conclusion 426

14
SIGNAL AND IMAGE PROCESSING **429**

Signals in Time 430
Exploring a Sound Sample 430
Analyzing Frequencies 433
Filtering 435
Image Processing 442
Loading and Converting Images 442
Counting Cells Using an Area Fraction 444
Counting Cells by Recognizing Features 446
Applying Advanced Array Concepts 450
Conclusion 464

15
PARALLEL PROCESSING **467**

Concurrency Paradigms 468
Multithreading 468
Easy Multithreading with Folds 469
Manual Multithreading with @threads 470
Spawning and Synchronizing Tasks 474
Multiprocessing 479
Easy Multiprocessing with pmap 480
Networking with Machine Files 481
Going Manual with @spawnat 483
Multiprocessing Threads with @distributed 484
Summary of Concurrency in Julia 485
Conclusion 486

INDEX **487**
