Contents

Introduction **13**

I How To Set Up and Maintain IMAP Servers 15

1 Protocols and Terms **17**

1.1 Why Is IMAP So Complex? 19

1.2 Comparing Courier and Cyrus 20

2 POP3 and IMAP at the Protocol Level **23**

2.1 POP3 23

2.1.1 Test Session 24

2.1.2 Authentication via APOP and KPOP 27

2.2 IMAP 28

2.2.1 The Design of the IMAP Protocol 29

2.2.2 Transcript of an IMAP Session 31

2.2.3 A Practical View of IMAP 33

2.2.4 Subscribing to IMAP Folders 41

3 Load Distribution and Reliability **43**

3.1 Load Balancer 45

3.1.1 DNS Round Robin 46

3.1.2 Round Robin via `iptables` 46

3.1.3 Linux Virtual Server 47

3.2 IMAP Proxies 50

The Book of IMAP
(C) 2008 by Peer Heinlein and Peer Hartleben

4 Selecting a Filesystem **53**
4.1 A Performance Test 55
4.2 Tuning the Performance of the Filesystem 57
4.2.1 The `atime` 57
4.2.2 Access Control Lists 58
4.2.3 The Ext2/Ext3 Option `dir_index` 58
4.2.4 Journal Mode 60
4.2.5 Optimized `fstab` Entries 62
4.3 RAID 62
4.4 NFS 63
4.4.1 Disabling `atime` and Optimizing Block Size 64
4.4.2 NFS Version 3 64
4.4.3 Fast I/O 65

5 Complementary Webmail Clients **67**
5.1 Squirrelmail 68
5.2 Horde/IMP 70
5.3 Fast Access via the IMAP Cache Proxy 73

6 Migrating IMAP servers **75**
6.1 Migration Using `imapsync` 76
6.2 Converting mbox to maildir 78
6.3 Modifying Folder Names 79
6.4 Determining Cleartext Passwords 81

II Courier-IMAP **83**

7 Structure and Basic Configuration **85**
7.1 Installing the Software 86
7.2 What Is Where? 87
7.3 Initial Start-Up 89
7.4 Courier and MTAs 90
7.4.1 Courier and Postfix 92
7.4.2 Courier and QMail 94
7.4.3 Courier and Exim 94

The Book of IMAP
(C) 2008 by Peer Heinlein and Peer Hartleben

7.5 Optimizing the Configuration 95
7.5.1 Real and “False” Configuration Parameters 96
7.5.2 POP3 Configuration in /etc/courier/pop3d 96
7.5.3 Configuring the IMAP Daemon in /etc/courier/imapd 99
7.6 The Configuration Files for SSL 102

8 Maildir as Email Storage Format 107
8.1 The IMAP Namespace 110
8.2 Filenames of Emails 111
8.2.1 Keywords: Custom IMAP Flags 115

9 User Data 119
9.1 authtest and DEBUG_LOGIN for Debugging Assistance 121
9.2 The authdaemond 122
9.3 Authentication via PAM 123
9.4 The authuserdb Module 124
9.4.1 Converting passwd into a userdb 125
9.4.2 Maintaining Account Data with userdb 127
9.4.3 Creating a Binary Version of the User Database 128
9.4.4 Separating the userdb into Multiple Files 129
9.4.5 The atime 130
9.5 Using QMail’s vchkpw Library for Authentication 130
9.6 Implementing Custom Authentication Methods 130
9.7 Integrating External Authentication Programs 131
9.8 Authentication via MySQL 133
9.9 Authentication via PostgreSQL 139
9.10 Authentication via LDAP 140
9.11 Obsolete Authentication Modules 143
9.11.1 The authpwd Module 143
9.11.2 The authshadow Module 143
9.11.3 The authcram Module 144
9.12 User Options 144
9.12.1 Saving User Options in the userdb 146
9.12.2 Individual User Options in an LDAP Directory 146

(C) 2008 by Peer Heinlein and Peer Hartleben

9.12.3 Storing User Options in Dedicated Fields in an SQL Table . . . 147
9.13 Saving Passwords: Cleartext or Hash? . . . 147
9.14 Username Selection When Maintaining Multiple Domains . . . 150

10 The Work of a Courier Administrator 153
10.1 Shared Folders . . . 153
10.1.1 Setting Up Virtual Shared Folders . . . 154
10.1.2 Creating Filesystem-Based Shared Folders . . . 163
10.2 Quotas . . . 166
10.2.1 Quotas for Courier . . . 167
10.2.2 Quotas and the MDA . . . 172
10.3 Building an IMAP Proxy with Courier . . . 175
10.4 Push Instead of Pull: The `IDLE` Command . . . 176
10.5 Sending Emails via the IMAP Server . . . 178

III Cyrus-IMAP 181

11 Structure and Basic Configuration 183
11.1 Installing Cyrus . . . 184
11.1.1 OpenSuSE/SuSE Linux Enterprise Server (SLES) . . . 185
11.1.2 Fedora Core/Red Hat . . . 186
11.1.3 Debian . . . 186
11.2 The Cyrus Hierarchy and Permissions System . . . 187
11.3 Features and Functions . . . 188
11.4 Quick Start . . . 190
11.4.1 Authentication and Mailboxes . . . 194
11.4.2 Tests . . . 195

12 A Closer Look at the Configuration Files 199
12.1 `/etc/cyrus.conf` . . . 199
12.1.1 The `START{}` Section . . . 200
12.1.2 The `SERVICES{}` Section . . . 200
12.1.3 The `EVENTS{}` Section . . . 201
12.2 `/etc/imapd.conf` . . . 203

13 Authentication and Safeguards **207**

13.1 Encrypting with SSL/TLS 208

13.1.1 SSL Transmission Types 208

13.1.2 Real and Fake Certificates 208

13.1.3 Creating and Integrating SSL Certificates 209

13.2 Cyrus SASL 211

13.2.1 Cyrus SASL Modules 212

13.2.2 The `auxprop` Module 213

13.2.3 The Authentication Process 214

13.3 Calling Different Data Sources 215

13.3.1 Standard Authentication Methods for Unix 215

13.3.2 `sasldb2` 216

13.3.3 Cyrus and MySQL 216

13.3.4 Cyrus and LDAP 220

13.3.5 Cyrus and Kerberos 223

14 Advanced Cyrus Configuration **225**

14.1 Mailbox Quotas 225

14.1.1 Automatic Quotas 226

14.1.2 Manual Quotas 228

14.2 Shared Folders and ACLs 230

14.3 Virtual Domains 232

14.3.1 The Underlying Concept 232

14.3.2 Effects on ACLs 236

14.3.3 Domain Administrators 237

14.4 Sorting Emails into Subdirectories 237

14.5 Email Partitions 239

14.6 The Sieve Email Filter 240

14.6.1 The Email Filter Daemon `timsieved` 240

14.6.2 Configuring and Testing 240

14.6.3 The `sieveshell` Administration Tool 242

14.6.4 The Sieve Script Language 246

14.6.5 Setting Up Sieve Scripts Automatically for New Accounts 251

14.6.6 Adapting Sieve Scripts 252

(C) 2008 by Peer Heinlein and Peer Hartleben

14.7 The notifyd Daemon 252
14.7.1 Drums or Smoke Signals? 253
14.8 Cyrus and Other MTAs 254
14.9 Backing Up and Restoring Data 255
14.9.1 Using reconstruct to Repair Mailboxes 255
14.9.2 Restoring Quotas 257
14.10 Performance Tuning 257
14.10.1 Parameters in /etc/imapd.conf that influence performance 258

15 Internal Structure and Modules **261**
15.1 The Cyrus Daemons 262
15.2 Tools for Analysis, Maintenance, and Repairs 263
15.2.1 Statistics and Analysis 263
15.2.2 Maintenance and Repair 266
15.2.3 Internal Tools 268
15.3 Other In-House Tools 269
15.4 The cyradm Administration Tool 271

16 Cyrus at the Filesystem Level **275**
16.1 The Email Directory 275
16.2 The Administration Directory 277

17 Cyrus in a Cluster **281**
17.1 The Cyrus Aggregator 281
17.1.1 The Aggregator Concept 282
17.1.2 The Cluster Setup 283
17.2 Cyrus Replication 291
17.2.1 Replicating the Authentication Data 291

The Book of IMAP
(C) 2008 by Peer Heinlein and Peer Hartleben

Appendixes 293

A IMAP Command Reference 295

A.1 Commands Always Available to Clients 296
A.2 Commands Available in the Not-Authenticated Status 297
A.3 Commands Available in the Authenticated Status 298
A.4 Commands Available in the Selected Status 303
A.5 IMAP Extensions 314
A.6 Experimental Commands 316

B POP3 Command Reference 317

B.1 An Overview of All Commands 318

C Installing from the Source Code 321

C.1 Courier 321
C.2 Cyrus 325
C.2.1 Cyrus Sources 325
C.2.2 Creating a System User 325
C.2.3 Installing Cyrus SASL 326
C.2.4 Installing the Cyrus IMAP Server 329
C.2.5 Convenient Starting and Stopping 330

(C) 2008 by Peer Heinlein and Peer Hartleben
