

THE TCP/IP GUIDE

by Charles M. Kozierok

SECTION I TCP/IP OVERVIEW AND BACKGROUND INFORMATION

PART I-1 NETWORKING FUNDAMENTALS

1		
1	NETWORKING INTRODUCTION, CHARACTERISTICS, AND TYPES	5
Introduction to Networking	6
What Is Networking?	6
The Advantages and Benefits of Networking	7
The Disadvantages and Costs of Networking	9
Fundamental Network Characteristics	10
Networking Layers, Models, and Architectures	10
Protocols: What Are They, Anyway?	11
Circuit-Switching and Packet-Switching Networks	13
Connection-Oriented and Connectionless Protocols	16
Messages: Packets, Frames, Datagrams, and Cells	17
Message Formatting: Headers, Payloads, and Footers	19
Message Addressing and Transmission Methods: Unicast, Broadcast, and Multicast	20
Network Structural Models and Client-Server and Peer-to-Peer Networking	23
Types and Sizes of Networks	26
Segments, Networks, Subnetworks, and Internetworks	27
The Internet, Intranets, and Extranets	30
2		
2	NETWORK PERFORMANCE ISSUES AND CONCEPTS	33
Putting Network Performance in Perspective	34
Balancing Network Performance with Key Nonperformance Characteristics	35
Performance Measurements: Speed, Bandwidth, Throughput, and Latency	36
Speed	36
Bandwidth	37
Throughput	37
Latency	37
Summary of Performance Measurements	38
Understanding Performance Measurement Units	39
Bits and Bytes	39
Baud	40
Theoretical and Real-World Throughput, and Factors Affecting Network Performance	41
Normal Network Overhead	41
External Performance Limiters	42
Network Configuration Problems	42
Asymmetry	43
Simplex, Full-Duplex, and Half-Duplex Operation	43
Simplex Operation	44
Half-Duplex Operation	44
Full-Duplex Operation	44
Quality of Service (QoS)	45

3	NETWORK STANDARDS AND STANDARDS ORGANIZATIONS	47
Proprietary, Open, and De Facto Standards	48
Proprietary Standards	48
Open Standards	49
De Facto Standards	50
Networking Standards	50
International Networking Standards Organizations	51
Networking Industry Groups	53
Internet Standards Organizations (ISOC, IAB, IESG, IETF, IRSG, and IRTF)	54
Internet Registration Authorities and Registries	
(IANA, ICANN, APNIC, ARIN, LACNIC, and RIPE NCC)	57
Internet Centralized Registration Authorities	57
Modern Hierarchy of Registration Authorities	58
Internet Standards and the Request for Comment (RFC) Process	59
RFC Categories	60
The Internet Standardization Process	60

4	A REVIEW OF DATA REPRESENTATION AND THE MATHEMATICS OF COMPUTING	63
Binary Information and Representation: Bits, Bytes, Nibbles, Octets, and Characters	64
Binary Information	64
Binary Information Representation and Groups	65
Byte Versus Octet	66
Decimal, Binary, Octal, and Hexadecimal Numbers	67
Binary Numbers and Their Decimal Equivalents	67
Making Binary Numbers Easier to Use by Grouping Bits	68
Octal Numbers	68
Hexadecimal Numbers	69
Decimal, Binary, Octal, and Hexadecimal Number Conversion	70
Binary, Octal, and Hexadecimal Conversions	70
Conversion from Binary, Octal, or Hexadecimal to Decimal	71
Conversion from Decimal to Binary, Octal or Hexadecimal	72
Binary, Octal, and Hexadecimal Arithmetic	73
Binary Arithmetic	74
Octal and Hexadecimal Arithmetic	74
Boolean Logic and Logical Functions	75
Boolean Logical Functions	75
Combining Boolean Expressions	77
Bit Masking (Setting, Clearing, and Inverting) Using Boolean Logical Functions	77
Setting Groups of Bits with OR	78
Clearing Bits with AND	78
Inverting Bits with XOR	79

PART I-2 THE OPEN SYSTEM INTERCONNECTION (OSI) REFERENCE MODEL

5 GENERAL OSI REFERENCE MODEL ISSUES AND CONCEPTS 83

History of the OSI Reference Model	84
General Reference Model Issues	85
The Benefits of Networking Models	85
Why Understanding the OSI Reference Model Is Important to You	86
How to Use the OSI Reference Model	87
Other Network Architectures and Protocol Stacks	88
Key OSI Reference Model Concepts	89
OSI Reference Model Networking Layers, Sublayers, and Layer Groupings	89
"N" Notation and Other OSI Model Layer Terminology	91
Interfaces: Vertical (Adjacent Layer) Communication	93
Protocols: Horizontal (Corresponding Layer) Communication	95
Data Encapsulation, Protocol Data Units (PDUs), and Service Data Units (SDUs)	97
Indirect Device Connection and Message Routing	100

6 OSI REFERENCE MODEL LAYERS 103

Physical Layer (Layer 1)	104
Data Link Layer (Layer 2)	105
Network Layer (Layer 3)	107
Transport Layer (Layer 4)	108
Session Layer (Layer 5)	111
Presentation Layer (Layer 6)	112
Application Layer (Layer 7)	113

7 OSI REFERENCE MODEL SUMMARY 115

Understanding the OSI Model: An Analogy	115
Remembering the OSI Model Layers: Some Mnemonics	118
Summarizing the OSI Model Layers: A Summary Chart	119

PART I-3 TCP/IP PROTOCOL SUITE AND ARCHITECTURE

8 TCP/IP PROTOCOL SUITE AND ARCHITECTURE 123

TCP/IP Overview and History	124
TCP/IP History and Development	124
Important Factors in the Success of TCP/IP	125
TCP/IP Services	127
The TCP/IP Client/Server Structural Model	127
Hardware and Software Roles	129
Transactional Roles	129
TCP/IP Architecture and the TCP/IP Model	130

Network Interface Layer	131
Internet Layer	131
Host-to-Host Transport Layer	132
Application Layer	132
TCP/IP Protocols	133

SECTION II TCP/IP LOWER-LAYER CORE PROTOCOLS

PART II-1 TCP/IP NETWORK INTERFACE LAYER PROTOCOLS

9 TCP/IP SERIAL LINE INTERNET PROTOCOL (SLIP) AND POINT-TO-POINT PROTOCOL PPP OVERVIEW AND FUNDAMENTALS 141

SLIP versus PPP	142
Serial Line Internet Protocol (SLIP)	143
SLIP Data Framing Method and General Operation	143
Problems and Limitations of SLIP	144
Point-to-Point Protocol (PPP) Overview and Fundamentals	146
Development and Standardization	146
Function and Architecture	147
Advantages and Benefits	147
PPP Main Components	148
PPP Functional Groups	149
General Operation	149
PPP Link Setup and Phases	150
PPP Standards	153

10 PPP CORE PROTOCOLS: LINK CONTROL, NETWORK CONTROL, AND AUTHENTICATION 157

Link Control Protocol (LCP)	157
LCP Packets	158
LCP Link Configuration	159
LCP Link Maintenance	161
LCP Link Termination	161
Other LCP Messages	161
The Network Control Protocols (IPCP, IPXCP, NBFCP, and Others)	161
Operation of NCPs	162
The Internet Protocol Control Protocol (IPCP): An Example NCP	164
PPP Authentication Protocols: PAP and CHAP	164
PAP	164
CHAP	165

11 PPP FEATURE PROTOCOLS 169

PPP Link Quality Monitoring and Reporting (LQM, LQR)	170
LQR Setup	170

Using Link Quality Reports	171
PPP Compression Control Protocol (CCP) and Compression Algorithms	171
CCP Operation: Compression Setup	172
CCP Configuration Options and Compression Algorithms	173
Compression Algorithm Operation: Compressing and Decompressing Data	173
PPP Encryption Control Protocol (ECP) and Encryption Algorithms	174
ECP Operation: Encryption Setup	175
ECP Configuration Options and Encryption Algorithms	175
Encryption Algorithm Operation: Encrypting and Decrypting Data	176
PPP Multilink Protocol (MP, MLP, MLPPP)	177
PPP Multilink Protocol Architecture	178
PPP Multilink Protocol Setup and Configuration	179
PPP Multilink Protocol Operation	179
PPP Bandwidth Allocation Protocol (BAP) and Bandwidth Allocation Control Protocol (BACP) ..	180
BACP Operation: Configuring the Use of BAP	181
BAP Operation: Adding and Removing Links	181

12

PPP PROTOCOL FRAME FORMATS 183

PPP General Frame Format	184
Protocol Field Ranges	185
Protocol Field Values	186
PPP Field Compression	187
PPP General Control Protocol Frame Format and Option Format	188
PPP Control Messages and Code Values	189
PPP Control Message Option Format	190
Summary of PPP Control Message Formatting	192
PPP Link Control Protocol (LCP) Frame Formats	192
PAP and CHAP Frame Formats	194
PPP PAP Control Frame Formats	194
PPP CHAP Control Frame Formats	196
PPP Multilink Protocol (MP) Frame Format	197
PPP MP Frame Fragmentation Process	198
PPP MP Fragment Frame Format	198
PPP MP Fragmentation Demonstration	200

PART II-2

TCP/IP NETWORK INTERFACE/INTERNET LAYER CONNECTION PROTOCOLS

13

ADDRESS RESOLUTION AND THE TCP/IP ADDRESS RESOLUTION PROTOCOL (ARP) 205

Address Resolution Concepts and Issues	206
The Need for Address Resolution	206
Address Resolution Through Direct Mapping	208
Dynamic Address Resolution	211
TCP/IP Address Resolution Protocol (ARP)	214
ARP Address Specification and General Operation	215
ARP Message Format	218
ARP Caching	220

Proxy ARP	223
TCP/IP Address Resolution for IP Multicast Addresses	225
TCP/IP Address Resolution for IP Version 6	226

14

REVERSE ADDRESS RESOLUTION AND THE TCP/IP REVERSE ADDRESS RESOLUTION PROTOCOL (RARP) 229

The Reverse Address Resolution Protocol (RARP)	230
RARP General Operation	231
Limitations of RARP	232

PART II-3

INTERNET PROTOCOL VERSION 4 (IP/IPV4)

15

INTERNET PROTOCOL VERSIONS: CONCEPTS AND OVERVIEW 237

IP Overview and Key Operational Characteristics	238
IP Functions	240
IP History, Standards, Versions, and Closely Related Protocols	241
IP Versions and Version Numbers	241
IP-Related Protocols	242

16

IPV4 ADDRESSING CONCEPTS AND ISSUES 243

IP Addressing Overview and Fundamentals	244
Number of IP Addresses Per Device	245
Address Uniqueness and Network Specificity	245
Contrasting IP Addresses and Data Link Layer Addresses	246
Private and Public IP Network Addresses	246
IP Address Configuration and Addressing Types	246
IP Address Size, Address Space, and Notation	247
IP Address Size and Binary Notation	247
IP Address Dotted Decimal Notation	247
IP Address Space	248
IP Basic Address Structure and Main Components	249
Network ID and Host ID	249
Location of the Division Between Network ID and Host ID	250
IP Addressing Categories and IP Address Adjuncts	251
Conventional (Classful) Addressing	252
Subnetted Classful Addressing	252
Classless Addressing	252
Subnet Mask and Default Gateway	253
Number of IP Addresses and Multihoming	253
IP Address Management and Assignment Methods and Authorities	255

17

CLASSFUL (CONVENTIONAL) ADDRESSING 257

IP Classful Addressing Overview and Address Classes	258
IP Address Classes	258

Rationale for Classful Addressing	259
IP Classful Addressing Network and Host Identification and Address Ranges	260
Classful Addressing Class Determination Algorithm	260
Determining Address Class from the First Octet Bit Pattern	262
IP Address Class A, B, and C Network and Host Capacities	264
IP Addresses with Special Meanings	265
IP Reserved, Private, and Loopback Addresses	267
Reserved Addresses	267
Private, Unregistered, Nonroutable Addresses	267
Loopback Addresses	268
Reserved, Private, and Loopback Addressing Blocks	269
IP Multicast Addressing	270
Multicast Address Types and Ranges	270
Well-Known Multicast Addresses	271
Problems with Classful IP Addressing	271

18

IP SUBNET ADDRESSING (SUBNETTING) CONCEPTS 275

IP Subnet Addressing Overview, Motivation, and Advantages	276
IP Subnetting: Three-Level Hierarchical IP Subnet Addressing	278
IP Subnet Masks, Notation, and Subnet Calculations	279
Function of the Subnet Mask	279
Subnet Mask Notation	280
Applying the Subnet Mask: An Example	281
Rationale for Subnet Mask Notation	283
IP Default Subnet Masks for Address Classes A, B, and C	283
IP Custom Subnet Masks	285
Deciding How Many Subnet Bits to Use	285
Determining the Custom Subnet Mask	286
Subtracting Two from the Number of Hosts per Subnet and (Possibly) Subnets per Network	288
IP Subnet Identifiers, Subnet Addresses, and Host Addresses	289
Subnet Identifiers	289
Subnet Addresses	289
Host Addresses Within Each Subnet	290
IP Subnetting Summary Tables for Class A, Class B, and Class C Networks	291
IP Variable Length Subnet Masking (VLSM)	294
The Solution: Variable Length Subnet Masking	296
Multiple-Level Subnetting Using VLSM	296

19

IP SUBNETTING PRACTICAL SUBNET DESIGN AND ADDRESS DETERMINATION EXAMPLE 299

IP Subnetting Step 1: Analyzing Requirements	300
IP Subnetting Step 2: Partitioning Network Address Host Bits	301
Class C Subnetting Design Example	302
Class B Subnetting Design Example	303
IP Subnetting Step 3: Determining the Custom Subnet Mask	304
Calculating the Custom Subnet Mask	305
Determining the Custom Subnet Mask Using Subnetting Tables	307
IP Subnetting Step 4: Determining Subnet Identifiers and Subnet Addresses	307
Class C Subnet ID and Address Determination Example	308

Class B Subnet ID and Address Determination Example	309
Using Subnet Address Formulas to Calculate Subnet Addresses	311
IP Subnetting Step 5: Determining Host Addresses for Each Subnet	312
Class C Host Address Determination Example	312
Class B Host Address Determination Example	315
Shortcuts for Computing Host Addresses	315

20

IP CLASSLESS ADDRESSING—CLASSLESS INTER-DOMAIN ROUTING (CIDR)/SUPERNETTING 317

IP Classless Addressing and Supernetting Overview	318
The Main Problem with Classful Addressing	318
The Solution: Eliminate Address Classes	319
The Many Benefits of Classless Addressing and Routing	319
IP Supernetting: CIDR Hierarchical Addressing and Notation	321
CIDR (Slash) Notation	321
Supernetting: Subnetting the Internet	322
Common Aspects of Classful and Classless Addressing	323
IP Classless Addressing Block Sizes and Classful Network Equivalents	324
IP CIDR Addressing Example	326
First Level of Division	326
Second Level of Division	327
Third Level of Division	329

21

INTERNET PROTOCOL DATAGRAM ENCAPSULATION AND FORMATTING 331

IP Datagram Encapsulation	332
IP Datagram General Format	334
IP Datagram Time to Live (TTL) Field	337
IP Datagram Type of Service (TOS) Field	337
IP Datagram Options and Option Format	338

22

IP DATAGRAM SIZE, FRAGMENTATION, AND REASSEMBLY 341

IP Datagram Size, MTU, and Fragmentation Overview	342
IP Datagram Size and the Underlying Network Frame Size	342
MTU and Datagram Fragmentation	343
Multiple-Stage Fragmentation	344
Internet Minimum MTU: 576 Bytes	345
MTU Path Discovery	345
IP Message Fragmentation Process	346
The IP Fragmentation Process	346
Fragmentation-Related IP Datagram Header Fields	348
IP Message Reassembly	349

23

IP ROUTING AND MULTICASTING 353

IP Datagram Delivery	354
----------------------------	-----

Direct Datagram Delivery	355
Indirect Datagram Delivery (Routing)	355
The Relationship Between Datagram Routing and Addressing	356
IP Routing Concepts and the Process of Next-Hop Routing	357
IP Routes and Routing Tables	359
IP Routing in a Subnet or Classless Addressing (CIDR) Environment	361
IP Multicasting	362
Multicast Addressing	363
Multicast Group Management	363
Multicast Datagram Processing and Routing	363

PART II-4

INTERNET PROTOCOL VERSION 6 (IPV6)

24

IPV6 OVERVIEW, CHANGES, AND TRANSITION

367

IPv6 Motivation and Overview	368
IPv6 Standards	368
Design Goals of IPv6	369
Major Changes and Additions in IPv6	370
Transition from IPv4 to IPv6	372
IPv4 to IPv6 Transition: Differences of Opinion	372
IPv4 to IPv6 Transition Methods	373

25

IPV6 ADDRESSING

375

IPv6 Addressing Overview: Addressing Model, Address Types, and Address Size	376
IPv6 Addressing Model Characteristics	376
IPv6 Supported Address Types	377
IPv6 Address Size and Address Space	378
IPv6 Address and Address Notation and Prefix Representation	380
IPv6 Address Hexadecimal Notation	380
Zero Compression in IPv6 Addresses	381
IPv6 Mixed Notation	382
IPv6 Address Prefix Length Representation	383
IPv6 Address Space Allocation	383
IPv6 Global Unicast Address Format	385
Rationale for a Structured Unicast Address Block	385
Generic Division of the Unicast Address Space	386
IPv6 Implementation of the Unicast Address Space	386
Original Division of the Global Routing Prefix: Aggregators	387
A Sample Division of the Global Routing Prefix into Levels	388
IPv6 Interface Identifiers and Physical Address Mapping	390
IPv6 Special Addresses: Reserved, Private, Unspecified, and Loopback	391
Special Address Types	392
IPv6 Private Addresses Type Scopes	393
IPv6/IPv4 Address Embedding	394
IPv6 Multicast and Anycast Addressing	396
IPv6 Multicast Addresses	396
IPv6 Anycast Addresses	400
IPv6 Autoconfiguration and Renumbering	400
IPv6 Stateless Autoconfiguration	401

IPv6 Device Renumbering	402
-------------------------------	-----

26

IPv6 Datagram Encapsulation and Formatting 403

IPv6 Datagram Overview and General Structure	404
IPv6 Datagram Main Header Format	406
IPv6 Next Header Field	407
Key Changes to the Main Header Between IPv4 and IPv6	408
IPv6 Datagram Extension Headers	409
IPv6 Header Chaining Using the Next Header Field	409
Summary of IPv6 Extension Headers	411
IPv6 Routing Extension Header	412
IPv6 Fragment Extension Header	413
IPv6 Extension Header Order	413
IPv6 Datagram Options	414

27

IPv6 Datagram Size, Fragmentation, Reassembly, and Routing 417

Overview of IPv6 Datagram Sizing and Fragmentation	418
Implications of IPv6's Source-Only Fragmentation Rule	419
The IPv6 Fragmentation Process	420
IPv6 Datagram Delivery and Routing	422

PART II-5

IP-RELATED FEATURE PROTOCOLS

28

IP Network Address Translation (NAT) Protocol 427

IP NAT Overview	428
Advantages of IP NAT	430
Disadvantages of IP NAT	431
IP NAT Address Terminology	432
IP NAT Static and Dynamic Address Mappings	435
Static Mappings	435
Dynamic Mappings	435
Choosing Between Static and Dynamic Mapping	435
IP NAT Unidirectional (Traditional/Outbound) Operation	436
IP NAT Bidirectional (Two-Way/Inbound) Operation	439
IP NAT Port-Based (Overloaded) Operation	442
IP NAT Overlapping/ Twice NAT Operation	445
IP NAT Compatibility Issues and Special Handling Requirements	449

29

IP Security (IPsec) Protocols 451

IPsec Overview, History, and Standards	452
Overview of IPsec Services and Functions	453
IPsec Standards	453
IPsec General Operation, Components, and Protocols	454

IPsec Core Protocols	455
IPsec Support Components	455
IPsec Architectures and Implementation Methods	456
Integrated Architecture	457
Bump in the Stack (BITS) Architecture	457
Bump in the Wire (BITW) Architecture	458
IPsec Modes: Transport and Tunnel	459
Transport Mode	459
Tunnel Mode	459
Comparing Transport and Tunnel Modes	459
IPsec Security Constructs	462
Security Policies, Security Associations, and Associated Databases	462
Selectors	463
Security Association Triples and Security Parameter Index (SPI)	463
IPsec Authentication Header (AH)	463
AH Datagram Placement and Linking	464
AH Format	467
IPsec Encapsulating Security Payload (ESP)	468
ESP Fields	468
ESP Operations and Field Use	469
ESP Format	472
IPsec Internet Key Exchange (IKE)	473
IKE Overview	474
IKE Operation	474

30

INTERNET PROTOCOL MOBILITY SUPPORT (MOBILE IP)

477

Mobile IP Overview, History, and Motivation	478
The Problem with Mobile Nodes in TCP/IP	478
The Solution: Mobile IP	480
Limitations of Mobile IP	481
Mobile IP Concepts and General Operation	482
Mobile IP Device Roles	483
Mobile IP Functions	484
Mobile IP Addressing: Home and Care-Of Addresses	485
Foreign Agent Care-Of Address	486
Mobile IP Agent Discovery	488
Agent Discovery Process	488
Agent Advertisement and Agent Solicitation Messages	488
Mobile IP Home Agent Registration and Registration Messages	493
Mobile Node Registration Events	493
Registration Request and Registration Reply Messages	493
Registration Process	494
Registration Request Message Format	495
Registration Reply Message Format	497
Mobile IP Data Encapsulation and Tunneling	497
Mobile IP Conventional Tunneling	498
Mobile IP Reverse Tunneling	500
Mobile IP and TCP/IP Address Resolution Protocol (ARP) Operation	500
Mobile IP Efficiency Issues	502
Mobile IP Security Considerations	505

PART II-6 IP SUPPORT PROTOCOLS

31

ICMP CONCEPTS AND GENERAL OPERATION 509

ICMP Overview, History, Versions, and Standards	510
ICMP General Operation	512
The ICMP Message-Passing Service	512
ICMP Error-Reporting Limited to the Datagram Source	513
ICMP Message Classes, Types, and Codes	514
ICMP Message Classes	514
ICMP Message Types	514
ICMP Message Codes	515
ICMP Message Class and Type Summary	515
ICMP Message Creation and Processing Conventions and Rules	517
Limitations on ICMP Message Responses	518
ICMP Message Processing Conventions	519
ICMP Common Message Format and Data Encapsulation	520
ICMP Common Message Format	520
Original Datagram Inclusion in ICMP Error Messages	521
ICMP Data Encapsulation	522

32

ICMPV4 ERROR MESSAGE TYPES AND FORMATS 523

ICMPv4 Destination Unreachable Messages	524
ICMPv4 Destination Unreachable Message Format	524
ICMPv4 Destination Unreachable Message Subtypes	525
Interpretation of Destination Unreachable Messages	526
ICMPv4 Source Quench Messages	527
ICMPv4 Source Quench Message Format	528
Problems with Source Quench Messages	528
ICMPv4 Time Exceeded Messages	529
ICMPv4 Time Exceeded Message Format	530
Applications of Time Exceeded Messages	531
ICMPv4 Redirect Messages	532
ICMPv4 Redirect Message Format	533
Redirect Message Interpretation Codes	534
Limitations of Redirect Messages	535
ICMPv4 Parameter Problem Messages	535
ICMPv4 Parameter Problem Message Format	536
Parameter Problem Message Interpretation Codes and the Pointer Field	536

33

ICMPV4 INFORMATIONAL MESSAGE TYPES AND FORMATS 539

ICMPv4 Echo (Request) and Echo Reply Messages	540
ICMPv4 Echo and Echo Reply Message Format	540
Application of Echo and Echo Reply Messages	541
ICMPv4 Timestamp (Request) and Timestamp Reply Messages	541
ICMPv4 Timestamp and Timestamp Reply Message Format	542
Issues Using Timestamp and Timestamp Reply Messages	543

ICMPv4 Router Advertisement and Router Solicitation Messages	543
The Router Discovery Process	544
ICMPv4 Router Advertisement Message Format	544
ICMPv4 Router Solicitation Message Format	546
Addressing and Use of Router Advertisement and Router Solicitation Messages	546
ICMPv4 Address Mask Request and Reply Messages	547
ICMPv4 Address Mask Request and Address Mask Reply Message Format	547
Use of Address Mask Request and Address Mask Reply Messages	548
ICMPv4 Traceroute Messages	548
ICMPv4 Traceroute Message Format	549
Use of Traceroute Messages	550

34

ICMPV6 ERROR MESSAGE TYPES AND FORMATS 551

ICMPv6 Destination Unreachable Messages	552
ICMPv6 Destination Unreachable Message Format	552
ICMPv6 Destination Unreachable Message Subtypes	553
Processing of Destination Unreachable Messages	554
ICMPv6 Packet Too Big Messages	554
ICMPv6 Packet Too Big Message Format	555
Applications of Packet Too Big Messages	555
ICMPv6 Time Exceeded Messages	556
ICMPv6 Time Exceeded Message Format	557
Applications of Time Exceeded Messages	558
ICMPv6 Parameter Problem Messages	558
ICMPv6 Parameter Problem Message Format	559
Parameter Problem Message Interpretation Codes and the Pointer Field	559

35

ICMPV6 INFORMATIONAL MESSAGE TYPES AND FORMATS 561

ICMPv6 Echo Request and Echo Reply Messages	562
ICMPv6 Echo and Echo Reply Message Format	562
Application of Echo and Echo Reply Messages	563
ICMPv6 Router Advertisement and Router Solicitation Messages	564
ICMPv6 Router Advertisement Message Format	564
ICMPv6 Router Solicitation Message Format	566
Addressing of Router Advertisement and Router Solicitation Messages	566
ICMPv6 Neighbor Advertisement and Neighbor Solicitation Messages	567
ICMPv6 Neighbor Advertisement Message Format	567
ICMPv6 Neighbor Solicitation Message Format	568
Addressing of Neighbor Advertisement and Neighbor Solicitation Messages	570
ICMPv6 Redirect Messages	570
ICMPv6 Redirect Message Format	570
Application of Redirect Messages	571
ICMPv6 Router Renumbering Messages	572
IPv6 Router Renumbering	572
ICMPv6 Router Renumbering Message Format	573
Addressing of Router Renumbering Messages	574
ICMPv6 Informational Message Options	574
Source Link-Layer Address Option Format	575
Target Link-Layer Address Option Format	576
Prefix Information Option Format	576

Redirected Header Option Format	578
MTU Option Format	579

36

IPv6 Neighbor Discovery (ND) Protocol 581

IPv6 ND Overview	582
Formalizing Local Network Functions: The Neighbor Concept	583
Neighbor Discovery Standards	583
IPv6 ND General Operational Overview	584
Host-Router Discovery Functions	585
Host-Host Communication Functions	585
Redirect Function	585
Relationships Between Functions	586
ICMPv6 Messages Used by ND	586
IPv6 ND Functions Compared to Equivalent IPv4 Functions	586
IPv6 ND Host-Router Discovery Functions	588
Host-Router Discovery Functions Performed by Routers	588
Host-Router Discovery Functions Performed by Hosts	589
IPv6 ND Host-Host Communication Functions	589
Next-Hop Determination	590
Address Resolution	590
Updating Neighbors Using Neighbor Advertisement Messages	591
Neighbor Unreachability Detection and the Neighbor Cache	591
Duplicate Address Detection	592
IPv6 ND Redirect Function	592

PART II-7

TCP/IP Routing Protocols (Gateway Protocols)

37

Overview of Key Routing Protocol Concepts 597

Routing Protocol Architectures	597
Core Architecture	598
Autonomous System (AS) Architecture	598
Modern Protocol Types: Interior and Exterior Routing Protocols	599
Routing Protocol Algorithms and Metrics	600
Distance-Vector (Bellman-Ford) Routing Protocol Algorithm	600
Link-State (Shortest Path First) Routing Protocol Algorithm	601
Hybrid Routing Protocol Algorithms	601
Static and Dynamic Routing Protocols	601

38

Routing Information Protocol (RIP, RIP-2, and RIPv6) 603

RIP Overview	604
RIP Standardization	604
RIP Operational Overview, Advantages, and Limitations	605
Development of RIP Version 2 (RIP-2) and RIPv6 for IPv6	606
RIP Route Determination Algorithm and Metric	606
RIP Routing Information and Route Distance Metric	606
RIP Route Determination Algorithm	607

RIP Route Determination and Information Propagation	607
Default Routes	610
RIP General Operation, Messaging, and Timers	610
RIP Messages and Basic Message Types	610
RIP Update Messaging and the 30-Second Timer	611
Preventing Stale Information: The Timeout Timer	611
Removing Stale Information: The Garbage-Collection Timer	612
Triggered Updates	612
RIP Problems and Some Resolutions	612
Issues with RIP's Algorithm	613
Issues with RIP's Metric	616
RIP Special Features for Resolving RIP Algorithm Problems	617
RIP Version-Specific Message Formats and Features	620
RIP Version 1 (RIP-1) Message Format and Features	620
RIP Version 2 (RIP-2) Message Format and Features	623
RIPng (RIPv6) Message Format and Features	626

39

OPEN SHORTEST PATH FIRST (OSPF)

631

OSPF Overview	632
Development and Standardization of OSPF	632
Overview of OSPF Operation	633
OSPF Features and Drawbacks	633
OSPF Basic Topology and the Link-State Database	634
OSPF Basic Topology	634
LSDB Information Storage and Propagation	635
OSPF Hierarchical Topology	636
OSPF Areas	636
Router Roles in OSPF Hierarchical Topology	637
OSPF Route Determination Using SPF Trees	639
The SPF Tree	639
OSPF Route Determination	640
OSPF General Operation	643
OSPF Message Types	644
OSPF Messaging	644
OSPF Message Authentication	645
OSPF Message Formats	645
OSPF Common Header Format	645
OSPF Hello Message Format	647
OSPF Database Description Message Format	647
OSPF Link State Request Message Format	649
OSPF Link State Update Message Format	649
OSPF Link State Acknowledgment Message Format	650
OSPF Link State Advertisements and the LSA Header Format	650

40

BORDER GATEWAY PROTOCOL (BGP/BGP-4)

653

BGP Overview	654
BGP Versions and Defining Standards	655
Overview of BGP Functions and Features	656
BGP Topology	657
BGP Speakers, Router Roles, Neighbors, and Peers	658

BGP AS Types, Traffic Flows, and Routing Policies	659
BGP Route Storage and Advertisement	662
BGP Route Information Management Functions	662
BGP Routing Information Bases (RIBs)	662
BGP Path Attributes and Algorithm Overview	663
BGP Path Attribute Classes	664
BGP Path Attribute Characteristics	665
BGP Route Determination and the BGP Decision Process	666
BGP Decision Process Phases	666
Criteria for Assigning Preferences to Routes	666
Limitations on BGP's Ability to Select Efficient Routes	667
Originating New Routes and Withdrawing Unreachable Routes	668
BGP General Operation and Messaging	668
Speaker Designation and Connection Establishment	668
Route Information Exchange	669
Connectivity Maintenance	669
Error Reporting	669
BGP Detailed Messaging, Operation, and Message Formats	670
BGP Message Generation and Transport	670
BGP General Message Format	670
BGP Connection Establishment: Open Messages	672
BGP Route Information Exchange: Update Messages	674
BGP Connectivity Maintenance: Keepalive Messages	677
BGP Error Reporting: Notification Messages	680

41

OTHER INTERIOR ROUTING PROTOCOLS

685

TCP/IP Gateway-to-Gateway Protocol (GGP)	686
The HELLO Protocol (HELLO)	687
Interior Gateway Routing Protocol (IGRP)	689
Enhanced Interior Gateway Routing Protocol (EIGRP)	691
TCP/IP Exterior Gateway Protocol (EGP)	692

PART II-8

TCP/IP TRANSPORT LAYER PROTOCOLS

42

OVERVIEW AND COMPARISON OF TCP AND UDP

697

Two Protocols for TCP/IP Transport Layer Requirements	698
Applications of TCP and UDP	699
TCP Applications	699
UDP Applications	700
Summary Comparison of UDP and TCP	700

43

TCP AND UDP ADDRESSING: PORTS AND SOCKETS

703

TCP/IP Processes, Multiplexing, and Client/Server Application Roles	704
Multiplexing and Demultiplexing	704
TCP/IP Client Processes and Server Processes	705
TCP/IP Ports: TCP/UDP Addressing	707

Multiplexing and Demultiplexing Using Ports	707
Source Port and Destination Port Numbers	707
Summary of Port Use for Datagram Transmission and Reception	709
TCP/IP Application Assignments and Server Port Number Ranges	709
Reserved Port Numbers	710
TCP/UDP Port Number Ranges	710
TCP/IP Client (Ephemeral) Ports and Client/Server Application Port Use	711
Ephemeral Port Number Assignment	712
Ephemeral Port Number Ranges	713
Port Number Use During a Client/Server Exchange	713
TCP/IP Sockets and Socket Pairs: Process and Connection Identification	714
Common TCP/IP Applications and Well-Known and Registered Port Numbers	715

44

TCP/IP USER DATAGRAM PROTOCOL (UDP) 719

UDP Overview, History, and Standards	720
UDP Operation	721
What UDP Does	721
What UDP Does Not Do	721
UDP Message Format	722
UDP Common Applications and Server Port Assignments	724
Why Some TCP/IP Applications Use UDP	725
Common UDP Applications and Server Port Use	726
Applications That Use Both UDP and TCP	727

45

TCP OVERVIEW, FUNCTIONS, AND CHARACTERISTICS 729

TCP Overview, History, and Standards	730
TCP History	730
Overview of TCP Operation	731
TCP Standards	731
TCP Functions	732
Functions That TCP Performs	733
Functions That TCP Doesn't Perform	733
TCP Characteristics	734
The Robustness Principle	736

46

TRANSMISSION CONTROL PROTOCOL (TCP) FUNDAMENTALS AND GENERAL OPERATION 737

TCP Data Handling and Processing	738
Increasing the Flexibility of Application Data Handling:	
TCP's Stream Orientation	738
TCP Data Packaging: Segments	738
TCP Data Identification: Sequence Numbers	739
The Need for Application Data Delimiting	741
TCP Sliding Window Acknowledgment System	741
The Problem with Unreliable Protocols: Lack of Feedback	742
Providing Basic Reliability Using Positive Acknowledgment with	
Retransmission (PAR)	742
Improving PAR	744

TCP's Stream-Oriented Sliding Window Acknowledgment System	744
More Information on TCP Sliding Windows	750
TCP Ports, Connections, and Connection Identification	751
TCP Common Applications and Server Port Assignments	752

47

TCP BASIC OPERATION: CONNECTION ESTABLISHMENT, MANAGEMENT, AND TERMINATION **755**

TCP Operational Overview and the TCP Finite State Machine (FSM)	756
Basic FSM Concepts	756
The Simplified TCP FSM	757
TCP Connection Preparation	760
Storing Connection Data: The Transmission Control Block (TCB)	761
Active and Passive OPENS	761
Preparation for Connection	762
TCP Connection Establishment Process: The Three-Way Handshake	762
Connection Establishment Functions	762
Control Messages Used for Connection Establishment: SYN and ACK	763
Normal Connection Establishment: The Three-Way Handshake	763
Simultaneous Open Connection Establishment	765
TCP Connection Establishment Sequence Number Synchronization and Parameter Exchange	767
Initial Sequence Number Selection	767
TCP Sequence Number Synchronization	768
TCP Parameter Exchange	769
TCP Connection Management and Problem Handling	770
The TCP Reset Function	770
Handling Reset Segments	771
Idle Connection Management and Keepalive Messages	771
TCP Connection Termination	772
Requirements and Issues In Connection Termination	772
Normal Connection Termination	773
The TIME-WAIT State	775
Simultaneous Connection Termination	776

48

TCP MESSAGE FORMATTING AND DATA TRANSFER **779**

TCP Message (Segment) Format	780
TCP Checksum Calculation and the TCP Pseudo Header	784
Detecting Transmission Errors Using Checksums	784
Increasing the Scope of Detected Errors: The TCP Pseudo Header	784
Advantages of the Pseudo Header Method	786
TCP Maximum Segment Size (MSS)	787
MSS Selection	788
TCP Default MSS	788
Nondefault MSS Value Specification	789
TCP Sliding Window Data Transfer and Acknowledgment Mechanics	790
Sliding Window Transmit and Receive Categories	790
Send (SEND) and Receive (RCV) Pointers	791
TCP Segment Fields Used to Exchange Pointer Information	793
An Example of TCP Sliding Window Mechanics	794
Real-World Complications of the Sliding Window Mechanism	797

TCP Immediate Data Transfer: Push Function	799
TCP Priority Data Transfer: Urgent Function	800

49

TCP RELIABILITY AND FLOW-CONTROL FEATURES 803

TCP Segment Retransmission Timers and the Retransmission Queue	804
Managing Retransmissions Using the Retransmission Queue	804
Recognizing When a Segment Is Fully Acknowledged	805
TCP Noncontiguous Acknowledgment Handling and Selective Acknowledgment (SACK)	808
Policies for Dealing with Outstanding Unacknowledged Segments	809
A Better Solution: Selective Acknowledgment (SACK)	811
TCP Adaptive Retransmission and Retransmission Timer Calculations	813
Adaptive Retransmission Based on RTT Calculations	813
Acknowledgment Ambiguity	814
Refinements to RTT Calculation and Karn's Algorithm	814
TCP Window Size Adjustment and Flow Control	815
Reducing Send Window Size to Reduce the Rate Data Is Sent	816
Reducing Send Window Size to Stop the Sending of New Data	818
Closing the Send Window	818
TCP Window-Management Issues	819
Problems Associated with Shrinking the TCP Window	819
Reducing Buffer Size Without Shrinking the Window	820
Handling a Closed Window and Sending Probe Segments	821
TCP Silly Window Syndrome	822
How Silly Window Syndrome Occurs	822
Silly Window Syndrome Avoidance Algorithms	825
TCP Congestion Handling and Congestion Avoidance Algorithms	826
Congestion Considerations	827
TCP Congestion-Handling Mechanisms	828

SECTION III

TCP/IP APPLICATION LAYER PROTOCOLS

PART III-1

NAME SYSTEMS AND TCP/IP NAME REGISTRATION AND NAME RESOLUTION

50

NAME SYSTEM ISSUES, CONCEPTS, AND TECHNIQUES 835

Name System Overview	836
Symbolic Names for Addressing	836
A Paradox: Name Systems Are Both Essential and Unnecessary	836
Basic Name System Functions: Name Space, Name Registration, and Name Resolution	839
Name Spaces and Name Architectures	841
Name Space Functions	841
Flat Name Architecture (Flat Name Space)	842
Hierarchical Name Architecture	842
Comparing Name Architectures	843
Name Registration Methods, Administration, and Authorities	844
Name Registration Functions	844
Hierarchical Name Registration	845

Name Registration Methods	845
Name Resolution Techniques and Elements	846
Name Resolution Methods	847
Client/Server Resolution Functional Elements	848
Efficiency, Reliability, and Other Name Resolution Considerations	848
Efficiency Considerations	849
Reliability Considerations	849
Other Considerations	850

51

TCP/IP NAME SYSTEMS OVERVIEW AND THE HOST TABLE NAME SYSTEM

851

A Brief History of TCP/IP Host Names and Name Systems	852
Developing the First Name System: ARPAnet Host Name Lists	852
Storing Host Names in a Host Table File	852
Outgrowing the Host Table Name System and Moving to DNS	853
The TCP/IP Host Table Name System	853
Host Table Name Resolution	854
Host Table Name Registration	854
Weaknesses of the Host Table Name System	855
Use of the Host Table Name System in Modern Networking	856

52

DOMAIN NAME SYSTEM (DNS) OVERVIEW, FUNCTIONS, AND CHARACTERISTICS

857

DNS Overview, History, and Standards	858
Early DNS Development and the Move to Hierarchical Domains	858
Standardization of DNS and Initial Defining Standards	859
DNS Evolution and Important Additional Standards	860
DNS Adaptation for Internet Protocol Version 6	860
DNS Design Goals, Objectives, and Assumptions	861
DNS Design Goals and Objectives	861
DNS Design Assumptions	862
DNS Components and General Functions	863
DNS Name Space	863
Name Registration (Including Administration and Authorities)	864
Name Resolution	864

53

DNS NAME SPACE, ARCHITECTURE, AND TERMINOLOGY

867

DNS Domains and the DNS Hierarchical Name Architecture	868
The Essential Concept in the DNS Name Space: Domains	868
The DNS Hierarchical Tree Structure of Names	868
DNS Structural Elements and Terminology	870
DNS Tree-Related Terminology	870
DNS Domain-Related Terminology	870
DNS Family-Related Terminology	871
DNS Labels, Names, and Syntax Rules	873
DNS Labels and Label Syntax Rules	873
Domain Name Construction	874
Absolute (Fully Qualified) and Relative (Partially Qualified) Domain Name Specifications	875

Fully Qualified Domain Names	875
Partially Qualified Domain Names	876

54

DNS NAME REGISTRATION, PUBLIC ADMINISTRATION, ZONES, AND AUTHORITIES

877

DNS Hierarchical Authority Structure and the Distributed Name Database	878
The DNS Root Domain Central Authority	878
TLD Authorities	879
Lower-Level Authority Delegation	879
Authority Hierarchy's Relationship to the Name Hierarchy	879
The DNS Distributed Name Database	880
DNS Organizational (Generic) TLDs and Authorities	880
Original Generic TLDs	881
New Generic TLDs	881
DNS Geopolitical (Country Code) TLDs and Authorities	884
Country Code Designations	884
Country Code TLD Authorities	885
Leasing/Sale of Country Code Domains	885
Drawbacks of the Geopolitical TLDs	886
Public Registration for Second-Level and Lower Domains	886
Registration Authority	887
Registration Coordination	888
DNS Public Registration Disputes and Dispute Resolution	888
Public Registration Disputes	888
Methods of Registration Dispute Resolution	890
The Uniform Domain Name Dispute Resolution Policy	890
DNS Name Space Administrative Hierarchy Partitioning: DNS Zones of Authority	891
Methods of Dividing a Name Space into Zones of Authority	892
The Impact of Zones on Name Resolution: Authoritative Servers	892
DNS Private Name Registration	894
Using Publicly Accessible Private Names	894
Using Private Names for Internal Use	895
Using Private Names on Networks Not Connected to the Internet	895

55

DNS NAME SERVER CONCEPTS AND OPERATION

897

DNS General Operation	898
DNS Name Server Architecture and the Distributed Name Database	898
DNS Server Support Functions	899
The Logical Nature of the DNS Name Server Hierarchy	900
DNS Name Server Data Storage	900
Binary and Text Representations of Resource Records (RRs)	900
Use of RRs and Master Files	901
Common RR Types	902
RR Classes	903
DNS Name Server Types and Roles	903
Master (Primary)/Slave (Secondary) Servers	903
Name Server Roles	905
Caching-Only Name Servers	905
DNS Zone Management, Contacts, and Zone Transfers	905
Domain Contacts	906

Zone Transfers	906
DNS Root Name Servers	909
Root Name Server Redundancy	909
Current Root Name Servers	910
DNS Name Server Caching	911
Name Server Caching	912
Caching Data Persistence and the Time to Live Interval	912
Negative Caching	914
DNS Name Server Load Balancing	914
Using Multiple Address Records to Spread Out Requests to a Domain	914
Using Multiple DNS Servers to Spread Out DNS Requests	915
DNS Name Server Enhancements	915
Automating Zone Transfers: DNS Notify	916
Improving Zone Transfer Efficiency: Incremental Transfers	917
Dealing with Dynamic IP Addresses: DNS Update/Dynamic DNS	917

56

DNS RESOLUTION CONCEPTS AND RESOLVER OPERATIONS 919

DNS Resolver Functions and General Operation	920
Name Resolution Services	920
Functions Performed by Name Resolvers	920
DNS Name Resolution Techniques: Iterative and Recursive Resolution	922
Iterative Resolution	923
Recursive Resolution	924
Contrasting Iterative and Recursive Resolution	924
DNS Name Resolution Efficiency Improvements: Caching and Local Resolution	925
The Motivation for Caching: Locality of Reference	926
Name Resolver Caching	926
Local Resolution	927
DNS Name Resolution Process	928
A Simple Example of DNS Name Resolution	928
Changes to Resolution to Handle Aliases (CNAME Records)	930
DNS Reverse Name Resolution Using the IN-ADDR.ARPA Domain	931
The Original Method: Inverse Querying	931
The IN-ADDR.ARPA Name Structure for Reverse Resolution	932
RR Setup for Reverse Resolution	932
DNS Electronic Mail Support and Mail Exchange (MX) ResourceRecords	934
Special Requirements for Email Name Resolution	935
The Mail Exchange (MX) Record and Its Use	935

57

DNS MESSAGING AND MESSAGE, RESOURCE RECORD, AND MASTER FILE FORMATS 937

DNS Message Generation and Transport	938
DNS Client/Server Messaging Overview	938
DNS Message Transport Using UDP and TCP	939
DNS Message Processing and General Message Format	940
DNS Message Header Format	942
DNS Question Section Format	945
DNS Message Resource Record Field Formats	945
DNS Common RR Format	946
RData Field Formats for Common RRs	946

DNS Name Notation and Message Compression	950
Standard DNS Name Notation	950
DNS Electronic Mail Address Notation	951
DNS Message Compression	951
DNS Master File Format	953
DNS Common Master File Record Format	954
Use and Interpretation of Partially Qualified Domain Names (PQDNs)	954
Master File Directives	955
Syntax Rules for Master Files	955
Specific RR Syntax and Examples	956
Sample Master File	958
DNS Changes to Support IPv6	958
IPv6 DNS Extensions	959
Proposed Changes to the IPv6 DNS Extensions	959

PART III-2

NETWORK FILE AND RESOURCE SHARING PROTOCOLS AND THE TCP/IP NETWORK FILE SYSTEM (NFS)

58		
NETWORK FILE AND RESOURCE SHARING AND THE TCP/IP NETWORK FILE SYSTEM (NFS)		963
File and Resource Sharing Concepts and Components	964	
The Power of File and Resource Sharing Protocols	964	
Components of a File and Resource Sharing Protocol	964	
NFS Design Goals, Versions, and Standards	965	
NFS Design Goals	965	
NFS Versions and Standards	966	
NFS Architecture and Components	967	
NFS Main Components	967	
Other Important NFS Functions	968	
NFS Data Definition with the External Data Representation (XDR) Standard	969	
A Method of Universal Data Exchange: XDR	969	
XDR Data Types	970	
NFS Client/Server Operation Using Remote Procedure Calls (RPCs)	971	
RPC Operation and Transport Protocol Usage	972	
Client and Server Responsibilities in NFS	973	
Client and Server Caching	973	
NFS Server Procedures and Operations	974	
NFS Version 2 and Version 3 Server Procedures	974	
NFS Version 4 Server Procedures and Operations	976	
NFS File System Model and the Mount Protocol	978	
The NFS File System Model	978	
The Mount Protocol	978	

PART III-3 HOST CONFIGURATION AND TCP/IP HOST CONFIGURATION PROTOCOLS

59 HOST CONFIGURATION CONCEPTS, ISSUES, AND MOTIVATION 983

The Purpose of Host Configuration	983
The Problems with Manual Host Configuration	984
Automating the Process: Host Configuration Protocols	985
The Role of Host Configuration Protocols in TCP/IP	985

60 TCP/IP BOOTSTRAP PROTOCOL (BOOTP) 987

BOOTP Overview, History, and Standards	988
BOOTP: Correcting the Weaknesses of RARP	988
Vendor-Specific Parameters	989
Changes to BOOTP and the Development of DHCP	990
BOOTP Client/Server Messaging and Addressing	990
BOOTP Messaging and Transport	991
BOOTP Use of Broadcasts and Ports	991
Retransmission of Lost Messages	992
BOOTP Detailed Operation	993
BOOTP Bootstrapping Procedure	993
Interpretation of the Client IP Address (CIAddr) Field	994
BOOTP Message Format	995
BOOTP Vendor-Specific Area and Vendor Information Extensions	998
BOOTP Vendor Information Extensions	999
BOOTP Vendor Information Fields	1000
BOOTP Relay Agents (Forwarding Agents)	1001
The Function of BOOTP Relay Agents	1002
Normal BOOTP Operation Using a Relay Agent	1002
Relaying BOOTP Requests Using Broadcasts	1003

61 DHCP OVERVIEW AND ADDRESS ALLOCATION CONCEPTS 1007

DHCP Overview, History, and Standards	1008
DHCP: Building on BOOTP's Strengths	1009
Overview of DHCP Features	1009
DHCP Address Assignment and Allocation Mechanisms	1010
DHCP Address Allocation	1010
DHCP Manual Allocation	1011
DHCP Dynamic Allocation	1011
DHCP Automatic Allocation	1012
DHCP Leases	1013
DHCP Lease Length Policy	1013
Issues with Infinite Leases	1015
DHCP Lease Life Cycle and Lease Timers	1015
DHCP Lease Life Cycle Phases	1016
Renewal and Rebinding Timers	1016
DHCP Lease Address Pools, Ranges, and Address Management	1018

Address Pool Size Selection	1018
Lease Address Ranges (Scopes)	1019
Other Issues with Address Management	1020

62

DHCP CONFIGURATION AND OPERATION **1023**

DHCP Overview of Client and Server Responsibilities	1024
DHCP Server Responsibilities	1024
DHCP Client Responsibilities	1025
DHCP Client/Server Roles	1025
DHCP Relay Agents	1026
DHCP Configuration Parameters, Storage, and Communication	1026
Configuration Parameter Management	1026
Parameter Storage	1027
Configuration Parameter Communication	1027
DHCP General Operation and the Client Finite State Machine	1027
DHCP Lease Allocation, Reallocation, and Renewal	1031
Initial Lease Allocation Process	1031
DHCP Lease Reallocation Process	1036
DHCP Lease Renewal and Rebinding Processes	1038
DHCP Early Lease Termination (Release) Process	1041
DHCP Parameter Configuration Process for Clients with Non-DHCP Addresses	1043

63

DHCP MESSAGING, MESSAGE TYPES, AND FORMATS **1045**

DHCP Message Generation, Addressing, Transport, and Retransmission	1046
Message Generation and General Formatting	1046
Message Transport	1046
Retransmission of Lost Messages	1047
DHCP Message Format	1048
DHCP Options	1051
Options and Option Format	1052
Option Categories	1053
Option Overloading	1054
Summary of DHCP Options/BOOTP Vendor Information Fields	1055
RFC 1497 Vendor Extensions	1055
IP Layer Parameters Per Host	1057
IP Layer Parameters Per Interface	1057
Link Layer Parameters Per Interface	1058
TCP Parameters	1058
Application and Service Parameters	1058
DHCP Extensions	1060

64

DHCP CLIENT/SERVER IMPLEMENTATION, FEATURES, AND IPV6 SUPPORT **1063**

DHCP Server and Client Implementation and Management Issues	1064
DHCP Server Implementations	1064
DHCP Client Implementations	1066
DHCP Message Relaying and BOOTP Relay Agents	1066
Use of BOOTP Relay Agents for DHCP	1067

DHCP Relaying Process	1067
DHCP Autoconfiguration/Automatic Private IP Addressing (APIPA)	1068
APIPA Operation	1069
APIPA Limitations	1070
DHCP Server Conflict Detection	1071
DHCP and BOOTP Interoperability	1072
BOOTP Clients Connecting to a DHCP Server	1073
DHCP Clients Connecting to a BOOTP Server	1073
DHCP Security Issues	1073
DHCP Security Concerns	1074
DHCP Authentication	1074
DHCP for IP Version 6 (DHCPv6)	1075
Two Methods for Autoconfiguration in IPv6	1075
DHCPv6 Operation Overview	1075
DHCPv6 Message Exchanges	1076

PART III-4

TCP/IP NETWORK MANAGEMENT FRAMEWORK AND PROTOCOLS

65

TCP/IP INTERNET STANDARD MANAGEMENT FRAMEWORK OVERVIEW

1079

Overview and History of the TCP/IP Internet Standard Management Framework and Simple Network Management Protocol (SNMP)	1080
Early Development of SNMP	1080
The Two Meanings of SNMP	1081
Design Goals of SNMP	1081
Further Development of SNMP and the Problem of SNMP Variations	1082
TCP/IP SNMP Operational Model, Components, and Terminology	1082
SNMP Device Types	1082
SNMP Entities	1083
SNMP Operational Model Summary	1083
TCP/IP Internet Standard Management Framework Architecture and Protocol Components ..	1085
SNMP Framework Components	1085
SNMP Framework Architecture	1086
TCP/IP Internet Standard Management Framework and SNMP Versions (SNMPv1, SNMPv2 Variants, and SNMPv3)	1087
SNMPv1	1087
SNMPsec	1088
SNMPv2	1088
SNMPv2 Variants	1088
SNMPv3	1089
TCP/IP Internet Standard Management Framework and SNMP Standards	1090

66

TCP/IP STRUCTURE OF MANAGEMENT INFORMATION (SMI) AND MANAGEMENT INFORMATION BASES (MIBS)

1095

SNMP's Information-Oriented Design	1096
MIB and MIB Objects	1097
Defining MIB Objects: SMI	1098
TCP/IP MIB Objects, Object Characteristics, and Object Types	1099

MIB Object Characteristics	1099
SMI Data Types	1101
TCP/IP MIB Object Descriptors and Identifiers and the Object Name Hierarchy	1102
Object Descriptors	1103
Object Identifiers	1103
Structure of the MIB Object Name Hierarchy	1104
Recursive Definition of MIB Object Identifiers	1106
TCP/IP MIB Modules and Object Groups	1106
The Organization of MIB Objects into Object Groups	1106
MIB Modules	1108
MIB Module Format	1109

67

TCP/IP SIMPLE NETWORK MANAGEMENT PROTOCOL (SNMP) CONCEPTS AND OPERATION

1111

SNMP Protocol Overview	1112
Early Development of SNMPv1	1112
SNMPv2 and the Division of SNMP into Protocol Operations and Transport Mappings	1113
SNMP Communication Methods	1114
SNMP Protocol Operations	1114
SNMP PDU Classes	1115
Basic Request/Response Information Poll Using GetRequest and (Get)Response Messages	1116
Table Traversal Using getNextRequest and GetBulkRequest Messages	1117
Object Modification Using SetRequest Messages	1119
Information Notification Using Trap and InformRequest Messages	1121
SNMP Protocol Security Issues and Methods	1122
Problems with SNMPv1 Security	1123
SNMPv2/v3 Security Methods	1123

68

SNMP PROTOCOL MESSAGING AND MESSAGE FORMATS

1125

SNMP Protocol Message Generation	1126
SNMP Transport Mappings	1126
UDP Message Size Issues	1127
Lost Transmission Issues	1127
SNMP General Message Format	1128
The Difference Between SNMP Messages and PDUs	1129
General PDU Format	1129
SNMP Version 1 (SNMPv1) Message Format	1131
SNMPv1 General Message Format	1131
SNMPv1 PDU Formats	1132
SNMP Version 2 (SNMPv2) Message Formats	1134
SNMP Version 2 (SNMPv2p) Message Format	1135
Community-Based SNMP Version 2 (SNMPv2c) Message Format	1136
User-Based SNMP Version 2 (SNMPv2u) Message Format	1136
SNMPv2 PDU Formats	1138
SNMP Version 3 (SNMPv3) Message Format	1141

69**TCP/IP REMOTE NETWORK MONITORING (RMON) 1145**

RMON Standards	1146
RMON MIB Hierarchy and Object Groups	1146
RMON Alarms, Events, and Statistics	1148

PART III-5**TCP/IP APPLICATION LAYER ADDRESSING AND APPLICATION CATEGORIES****70****TCP/IP APPLICATION LAYER ADDRESSING: UNIFORM RESOURCE IDENTIFIERS, LOCATORS, AND NAMES (URIS, URLS, AND URNS) 1151**

URI Overview and Standards	1152
URI Categories: URLs and URNs	1153
URI Standards	1154
URL General Syntax	1154
Common Internet Scheme Syntax	1155
Omission of URL Syntax Elements	1156
URL Fragments	1157
Unsafe Characters and Special Encodings	1157
URL Schemes and Scheme-Specific Syntaxes	1158
World Wide Web/Hypertext Transfer Protocol Syntax (http)	1158
File Transfer Protocol Syntax (ftp)	1159
Electronic Mail Syntax (mailto)	1159
Gopher Protocol Syntax (gopher)	1160
Network News/Usenet Syntax (news)	1160
Network News Transfer Protocol Syntax (nntp)	1160
Telnet Syntax (telnet)	1161
Local File Syntax (file)	1161
Special Syntax Rules	1161
URL Relative Syntax and Base URLs	1162
Interpretation Rules for Relative URLs	1163
Practical Interpretation of Relative URLs	1164
URL Length and Complexity Issues	1166
URL Wrapping and Delimiting	1167
Explicit URL Delimiting and Redirectors	1168
URL Abbreviation	1168
URL Obscuration, Obfuscation, and General Trickery	1168
URNs	1171
The Problem With URLs	1171
Overview of URNs	1172
URN Namespaces and Syntax	1172
URN Resolution and Implementation Difficulties	1173

71**FILE AND MESSAGE TRANSFER OVERVIEW AND APPLICATION CATEGORIES 1175**

File Concepts	1176
Application Categories	1176

General File Transfer Applications	1176
Message Transfer Applications	1176
The Merging of File and Message Transfer Methods	1177

PART III-6

TCP/IP GENERAL FILE TRANSFER PROTOCOLS

72

FILE TRANSFER PROTOCOL (FTP) 1181

FTP Overview, History, and Standards	1182
FTP Development and Standardization	1182
Overview of FTP Operation	1183
FTP Operational Model, Protocol Components, and Key Terminology	1184
The Server-FTP Process and User-FTP Process	1184
FTP Control Connection and Data Connection	1184
FTP Process Components and Terminology	1185
Server-FTP Process Components	1185
User-FTP Process Components	1186
Third-Party File Transfer (Proxy FTP)	1186
FTP Control Connection Establishment, User Authentication, and Anonymous FTP Access	1187
FTP Login Sequence and Authentication	1187
FTP Security Extensions	1188
Anonymous FTP	1189
FTP Data Connection Management	1189
Normal (Active) Data Connections	1190
Passive Data Connections	1190
Efficiency and Security Issues Related to the Connection Methods	1191
FTP General Data Communication and Transmission Modes	1193
Stream Mode	1193
Block Mode	1194
Compressed Mode	1194
FTP Data Representation: Data Types, Format Control, and Data Structures	1194
FTP Data Types	1195
ASCII Data Type Line-Delimiting Issues	1196
FTP Format Control	1196
FTP Data Structures	1197
FTP Internal Command Groups and Protocol Commands	1197
FTP Command Groups and Commands	1197
FTP Replies	1200
Advantages of Using Both Text and Numeric Replies	1200
Reply Code Structure and Digit Interpretation	1201
FTP Multiple-Line Text Replies	1204
FTP User Interface and User Commands	1205
Command-Line and Graphical FTP Interfaces	1205
Typical FTP User Commands	1206
Sample FTP Session	1208

73

TRIVIAL FILE TRANSFER PROTOCOL (TFTP) 1211

TFTP Overview, History, and Standards	1212
Why TFTP Was Needed	1212
Comparing FTP and TFTP	1213

Overview of TFTP Operation	1213
TFTP General Operation, Connection Establishment, and Client/Server Communication	1214
Connection Establishment and Identification	1215
Lock-Step Client/Server Messaging	1215
Difficulties with TFTP's Simplified Messaging Mechanism	1216
TFTP Detailed Operation and Messaging	1216
Initial Message Exchange	1216
Data Block Numbering	1217
TFTP Read Process Steps	1217
TFTP Write Process Steps	1218
TFTP Options and Option Negotiation	1220
TFTP Option Negotiation Process	1220
TFTP Options	1223
TFTP Message Formats	1223
Read Request and Write Request Messages	1223
Data Messages	1224
Acknowledgment Messages	1225
Error Messages	1225
Option Acknowledgment Messages	1226

PART III-7

TCP/IP ELECTRONIC MAIL SYSTEM: CONCEPTS AND PROTOCOLS

74

TCP/IP ELECTRONIC MAIL SYSTEM OVERVIEW AND CONCEPTS

1229

TCP/IP Electronic Mail System Overview and History	1230
The Early Days of Email	1230
History of TCP/IP Email	1231
Overview of the TCP/IP Email System	1231
TCP/IP Email Communication Overview	1232
TCP/IP Email Message Communication Model	1234
Protocol Roles in Email Communication	1236

75

TCP/IP ELECTRONIC MAIL ADDRESSES AND ADDRESSING

1237

TCP/IP Email Addressing and Address Resolution	1238
Standard DNS-Based Email Addresses	1238
Special Requirements of Email Addresses	1239
TCP/IP Historical and Special Email Addressing	1240
FidoNet Addressing	1240
UUCP-Style Addressing	1241
Addressing for Gatewaying	1241
TCP/IP Email Aliases and Address Books	1242
Multiple Recipient Addressing	1242
Mailing Lists	1243

76

TCP/IP ELECTRONIC MAIL MESSAGE FORMATS AND MESSAGE PROCESSING: RFC 822 AND MIME

1245

TCP/IP Email RFC 822 Standard Message Format Overview	1246
Development of the RFC 822 Message Format Standard	1247
Overview of RFC 822 Messages	1247
General RFC 822 Message Structure	1248
TCP/IP Email RFC 822 Standard Message Format Header Fields and Groups	1249
Header Field Structure	1249
Header Field Groups	1249
Common Header Field Groups and Header Fields	1250
TCP/IP Email RFC 822 Standard Message Format Processing and Interpretation	1253
MIME Overview	1254
MIME Capabilities	1255
MIME Standards	1256
MIME Basic Structures and Headers	1257
Basic Structures	1258
MIME Entities	1258
Primary MIME Headers	1258
Additional MIME Headers	1259
MIME Content-Type Header and Discrete Media	1260
Content-Type Header Syntax	1260
Discrete Media Types and Subtypes	1261
MIME Composite Media Types: Multipart and Encapsulated Message Structures	1265
MIME Multipart Message Type	1265
Multipart Message Encoding	1266
MIME Encapsulated Message Type	1269
MIME Content-Transfer-Encoding Header and Encoding Methods	1269
7-Bit and 8-Bit Encoding	1270
Quoted-Printable Encoding	1270
Base64 Encoding	1270
MIME Extension for Non-ASCII Mail Message Headers	1273

77

TCP/IP ELECTRONIC MAIL DELIVERY PROTOCOL: THE SIMPLE MAIL TRANSFER PROTOCOL (SMTP)

1275

SMTP Overview, History, and Standards	1276
SMTP Standards	1276
SMTP Communication and Message Transport Methods	1277
Terminology: Client/Server and Sender/Receiver	1279
SMTP Connection and Session Establishment and Termination	1279
Overview of Connection Establishment and Termination	1280
Connection Establishment and Greeting Exchange	1280
Connection Establishment Using SMTP Extensions	1281
Connection Termination	1282
SMTP Mail Transaction Process	1283
Overview of SMTP Mail Transaction	1283
SMTP Mail Transaction Details	1284
SMTP Special Features, Capabilities, and Extensions	1286
SMTP Special Features and Capabilities	1287
SMTP Extensions	1288
SMTP Security Issues	1289
SMTP Commands	1291

SMTP Replies and Reply Codes	1293
Reply Code Structure and Digit Interpretation	1293
SMTP Multiple-Line Text Replies	1296
Enhanced Status Code Replies	1296

78

TCP/IP ELECTRONIC MAIL ACCESS AND RETRIEVAL PROTOCOLS AND METHODS

1297

TCP/IP Email Mailbox Access Model, Method, and Protocol Overview	1298
Email Access and Retrieval Models	1299
TCP/IP Post Office Protocol (POP/POP3)	1300
POP Overview, History, Versions, and Standards	1300
POP3 General Operation	1302
POP3 Session States	1302
TCP/IP Internet Message Access Protocol (IMAP/IMAP4)	1309
IMAP Overview, History, Versions, and Standards	1310
IMAP4 General Operation	1312
IMAP Session States	1312
IMAP Commands, Results, and Responses	1314
IMAP4 Not Authenticated State: User Authentication Process and Commands	1318
IMAP4 Authenticated State: Mailbox Manipulation/Selection Process and Commands	1319
IMAP4 Selected State: Message Manipulation Process and Commands	1321
TCP/IP Direct Server Email Access	1323
TCP/IP World Wide Web Email Access	1325

PART III-8

TCP/IP WORLD WIDE WEB AND THE HYPERTEXT TRANSFER PROTOCOL (HTTP)

79

WORLD WIDE WEB AND HYPERTEXT OVERVIEW AND CONCEPTS

1329

World Wide Web and Hypertext Overview and History	1330
History of Hypertext	1330
The World Wide Web Today	1331
World Wide Web System Concepts and Components	1332
Major Functional Components of the Web	1332
Web Servers and Web Browsers	1333
World Wide Web Media and the Hypertext Markup Language	1334
Overview of HTML	1334
HTML Elements and Tags	1335
Common HTML Elements	1336
Common Text Formatting Tags	1338
World Wide Web Addressing: HTTP Uniform Resource Locators	1338
HTTP URL Syntax	1339
Resource Paths and Directory Listings	1340

80

HTTP GENERAL OPERATION AND CONNECTIONS

1341

HTTP Versions and Standards	1342
-----------------------------------	------

HTTP/0.9	1342
HTTP/1.0	1342
HTTP/1.1	1343
Future HTTP Versions	1344
HTTP Operational Model and Client/Server Communication	1345
Basic HTTP Client/Server Communication	1345
Intermediaries and the HTTP Request/Response Chain	1346
The Impact of Caching on HTTP Communication	1347
HTTP Transitory and Persistent Connections and Pipelining	1348
Persistent Connections	1349
Pipelining	1349
HTTP Persistent Connection Establishment and Management	1350

81

HTTP MESSAGES, METHODS, AND STATUS CODES **1353**

HTTP Generic Message Format	1354
HTTP Request Message Format	1355
Request Line	1356
Headers	1358
HTTP Response Message Format	1358
Status Line	1359
Headers	1360
HTTP Methods	1361
Common Methods	1361
Other Methods	1362
Safe and Idempotent Methods	1363
HTTP Status Codes and Reason Phrases	1364
Status Code Format	1364
Reason Phrases	1365
The 100 (Continue) Preliminary Reply	1368

82

HTTP MESSAGE HEADERS **1369**

HTTP General Headers	1370
Cache-Control Headers	1370
Warning	1371
Other HTTP General Headers	1372
HTTP Request Headers	1373
HTTP Response Headers	1376
HTTP Entity Headers	1377

83

HTTP ENTITIES, TRANSFERS, CODING METHODS, AND CONTENT MANAGEMENT **1381**

HTTP Entities and Internet Media Types	1382
Media Types and Subtypes	1382
HTTP's Use of Media Types	1383
Differences in HTTP and MIME Constructs	1383
HTTP Content and Transfer Encodings	1384
HTTP's Two-Level Encoding Scheme	1385
Use of Content and Transfer Encodings	1385

HTTP Data Length Issues, Chunked Transfers, and Message Trailers	1386
Dynamic Data Length	1387
Chunked Transfers and Message Trailers	1387
HTTP Content Negotiation and Quality Values	1390
Content Negotiation Techniques	1390
Quality Values for Preference Weights	1392

84

HTTP FEATURES, CAPABILITIES, AND ISSUES 1393

HTTP Caching Features and Issues	1394
Benefits of HTTP Caching	1394
Cache Locations	1395
Cache Control	1396
Important Caching Issues	1397
HTTP Proxy Servers and Proxying	1398
Benefits of Proxies	1398
Comparing Proxies and Caches	1399
Important Proxying Issues	1399
HTTP Security and Privacy	1400
HTTP Authentication Methods	1400
Security and Privacy Concerns and Issues	1401
Methods for Ensuring Privacy in HTTP	1402
HTTP State Management Using Cookies	1402
Issues with Cookies	1403
Managing Cookie Use	1404

PART III-9

OTHER FILE AND MESSAGE TRANSFER APPLICATIONS

85

USENET (NETWORK NEWS) AND THE TCP/IP NETWORK NEWS TRANSFER PROTOCOL (NNTP) 1409

Usenet Overview, History, and Operation	1410
History of Usenet	1410
Usenet Operation and Characteristics	1411
Usenet Transport Methods	1412
Usenet Communication Model	1413
Usenet's Public Distribution Orientation	1414
Usenet Communication Process	1414
Message Propagation and Server Organization	1416
Usenet Addressing: Newsgroups	1416
Usenet Message Format and Special Headers	1420
Usenet Header Categories and Common Headers	1420
Additional Usenet Headers	1422
Usenet MIME Messages	1423
NNTP Overview and General Operation	1423
NNTP Interserver Communication Process: News Article Propagation	1425
The Usenet Server Structure	1425
Basic NNTP Propagation Methods	1426
NNTP Client-Server Communication Process: News Posting and Access	1428
News Posting, Access, and Reading	1429
News Access Methods	1430

Other Client/Server Functions	1430
Article Threading	1431
NNTP Commands and Command Extensions	1432
Command Syntax	1432
Base Command Set	1432
NNTP Command Extensions	1434
NNTP Status Responses and Response Codes	1438

86

GOPHER PROTOCOL (GOPHER) 1443

Gopher Overview and General Operation	1443
Information Storage on Gopher Servers	1444
Gopher Client/Server Operation	1444
Important Differences Between Gopher and the Web	1445
Gopher's Role in the Modern Internet	1445

PART III-10

INTERACTIVE AND ADMINISTRATIVE UTILITIES AND PROTOCOLS

87

TCP/IP INTERACTIVE AND REMOTE APPLICATION PROTOCOLS 1449

Telnet Protocol	1450
Telnet Overview, History, and Standards	1450
Telnet Connections and Client/Server Operation	1453
Telnet Communications Model and the Network Virtual Terminal (NVT)	1455
Telnet Protocol Commands	1458
Telnet Interrupt Handling	1461
Telnet Options and Option Negotiation	1462
Berkeley Remote (r) Commands	1466
Berkeley Remote Login (rlogin)	1467
Berkeley Remote Shell (rsh)	1468
Other Berkeley Remote Commands	1469
Internet Relay Chat Protocol (IRC)	1470
IRC Communication Model and Client/Server Operation	1471
Messaging and IRC Channels	1471
IRC and the Modern Internet	1472

88

TCP/IP ADMINISTRATION AND TROUBLESHOOTING UTILITIES AND PROTOCOLS 1473

TCP/IP Host Name Utility (hostname)	1474
TCP/IP Communication Verification Utility (ping)	1475
Operation of the ping Utility	1476
Basic Use of ping	1476
Methods of Diagnosing Connectivity Problems Using ping	1477
ping Options and Parameters	1478
TCP/IP Route Tracing Utility (traceroute)	1479
Operation of the traceroute Utility	1480
Basic Use of the traceroute Utility	1481

tracert Options and Parameters	1482
TCP/IP Address Resolution Protocol Utility (arp)	1483
TCP/IP DNS Name Resolution and Lookup Utilities (nslookup, host, and dig)	1484
The nslookup Utility	1485
The host Utility	1487
The dig Utility	1488
TCP/IP DNS Registry Database Lookup Utility (whois/nicname)	1489
TCP/IP Network Status Utility (netstat)	1491
The UNIX netstat Utility	1492
The Windows netstat Utility	1494
TCP/IP Configuration Utilities (ifconfig, ipconfig, and winipcfg)	1496
The ifconfig Utility for UNIX	1496
The ipconfig for Windows NT, 2000, and XP	1498
The winipcfg Utility for Windows 95, 98, and Me	1500
Miscellaneous TCP/IP Troubleshooting Protocols	1501
